

Dr Julia Lockett is now at GPs on Bayview

MBBS (Hons) UWA
FRACGP

I believe in listening and taking time to identify problems and address my patients' physical and emotional needs, explore preventative health care and address the underlying causes of disease.

As such I enjoy working with people when they are well and unwell, and treating a very broad range of patients and conditions. Mental health, chronic diseases including cancer, pain, diabetes, kidney disease, respiratory and vascular disease, addiction, obesity, diseases of aging to name a few.

Medicine is always progressing and it is exciting to see this manifest in improvements in treatment and care we can offer to our patients. I really enjoy continuing to learn, and working collaboratively with specialist colleagues to provide best practice Medicine.

Outside of work I value time with my kids and loved ones while we do the school/activity juggle, debate/ navel gaze, listen to music or hopefully get to the bush or sea.

I look forward to working with the patients and staff at GPs on Bayview.
